

# JD EDWARDS ENTERPRISEONE AGREEMENT MANAGEMENT

**ORACLE**

JD EDWARDS ENTERPRISEONE

## KEY BENEFITS

- Streamline ongoing management of partnership agreements
- Ensure compliance with contract terms
- Increase accuracy of settlements

## The Issue: Efficiently Managing Transactions for Multiple, Diverse Partnerships

Companies are looking to partner with others to eliminate redundancies throughout the supply chain. For faster response in demand-driven market environments, they're stripping down to core competencies and sharing expertise and physical assets. The upside?

Successful partnerships increase productivity, improve customer service, and reduce capital expenses. The downside? Managing agreement terms and transactions for an increasing variety of partnering arrangements poses a significant challenge.

## The Solution: Detailed and Accessible Information

Oracle's JD Edwards EnterpriseOne Agreement Management facilitates your partnership arrangements by enabling you to easily set up, change, and manage agreements.

Compliance is easy to track because sales and purchase order transactions can be immediately associated with the appropriate agreements and agreement status is monitored.

You have the details you need, when you need them, including:

- Complete information on a variety of agreements, from simple purchase and supply contracts to more complex exchange and throughput agreements, as well as storage deals.
- Agreement association with each transaction — sale, purchase, transfer, or inventory movement to automatically keep a running balance.
- Fast access to agreements through a wide range of search criteria, such as branch/plant (depot), agreement name or description, type, status, effective date, product number, and partner agreement number.

JD Edwards EnterpriseOne Agreement Management makes it easy for you to enhance partner relationships by handling compliance in an efficient, organized manner. With online statements, you can quickly monitor variances between contracted quantity and total transaction quantity. You can also generate statements that confirm outstanding balances and settle discrepancies by creating a product quantity or financial settlement transaction. And you can simply adjust agreement amounts and values in the system at any time, based on negotiations with partners.

The key is managing agreements effectively. When all parties know where they stand, your trading relationships can be mutually beneficial and profitable.

## Feature/Function Highlights

- Agreement association with each recorded transaction.
- Multiple products on a single agreement.
- Balance statement for partners.
- Minimum and maximum contract quantities.
- Buying structures.
- Sales line override with contract price.
